Tropical Marine Biological Research
Summer 2016

Alejandro Acevedo¹
Deborah Donovan¹
Ben Miner¹
Sergio Francisco Flores Ramírez²
¹Western Washington University, Washington, USA
²Universidad Autónoma de Baja California Sur, México

Dates:
June 27 – July 15
Tropical Marine Organismal Biological Research (BIOL437A) 6 cr
July 16 – July 29
Tropical Marine Ecological Research (BIOL 437B) 6 cr

Pre-requisite:
BIOL397A
BIOL437A is a co-requisite for BIOL437 B
BIOL437B is a co-requisite for BIOL437A

Location:
Unidad Pichilingue, La Paz, Baja California Sur, México

Coordinator:
Alejandro Acevedo (email: acevedo@biol.wwu.edu, phone: 650-3653)

You will learn to conduct marine biological research in different tropical habitats from Western Washington University (WWU) and Universidad Autónoma de Baja California Sur (UABCS) faculty. The course will be based at the Unidad Pichilingue, B.C.S., México.

Course Aims
1) You will enhance your science process skills in preparation of a career as a scientist: identifying appropriate sources of information; gathering, synthesizing and critically evaluating knowledge; thinking analytically and conceiving scientific questions; designing a research project, including questions, hypotheses, predictions, methods and statistical analyses; collecting and analyzing data; communicating ideas and results concisely and effectively in written and oral form; and working in collaboration with others to integrate knowledge into a coherent body of work.

2) You will construct your own knowledge on the biology and ecology of tropical organisms.

3) You will learn to work and interact with students from a different country, culture and background.

Innovative teaching techniques will be employed to fulfill these aims. You will:

In the classroom:
• Participate in activities to share your ideas on key concepts, obtain experimental or observational evidence to test your ideas and infer conclusions from your evidence.
• Work in randomly-assigned groups to construct your own knowledge.
• Prepare concept maps to identify the theoretical framework of published research and develop your research ideas within an appropriate framework.
• Be actively engaged in brief lectures to learn the most relevant information and current research.

In the lab and field:
• Prepare species lists of key tropical habitats from visual and photographic surveys.
• Conduct guided physiological, genetic and behavioral studies on tropical marine organisms.
• Conceive, develop, conduct and present orally and in writing an independent research project in collaboration with other classmates.
Course Description
You should view this course as an apprenticeship in marine biological research, and we will treat you as the fledging scientist that you are. The course will rely on class activities, discussions, laboratory experiments, and field projects. You will engage in extensive independent work, with faculty as your mentors and guides.

The Gulf of California and the Pichilingue Research Institution are an excellent setting for this course. Many diverse and rich marine habitats are easily accessed from the facilities, and provide the opportunity to conduct tropical marine biological research through direct observations and research. The facilities allow for both field and laboratory projects.

References
Required:
-Copies of research papers. (Distributed by faculty.)

Recommended:
-Steinbeck, J. The Log from the Sea of Cortez.

Evaluation and Grading
BIOL437A
Species list: Cantamar, Calerita, Balandra, Bahia Magdalena, Cabo Pulmo (due July 12th) 20 %
Photo evidence Cantamar, Calerita, Balandra, Bahia Magdalena, Cabo Pulmo (due July 12th) 15 %
Paper on one guided project (due July 17th, 22nd or 24th) 30 %
Concept maps for each guided project (due July 10th, 15th, 18th) 15 %
Individual review of classmates’ guided project (due July 13rd, 19th or 21st) 10 %
Participation, includes attendance and completing ungraded assignments: 10 %
-Analysis and presentation of diversity study in Larabee and Calerita (due June 29th)
-Choice of guided project paper to write (due July 2nd)
-Draft paper of one guided project (due July 11th, 17th or 19th)

BIOL437B
Concept map and proposal of independent project (due July 18th) 10 %
Independent project presentation (due July 26th) 45 %
Independent project paper (due July 28th) 35 %
Participation, includes performance in activities and attendance 10 %

Grading Scale
95% or greater: A 78-81%: B- 66-68%: D+
90-94%: A- 75-77%: C+ 63-65%: D
86-89%: B+ 72-74%: C 60-62%: D-
82-85%: B 69-71%: C- below 60%: F

Given the collaborative nature of the class attendance is MANDATORY and assignments will not be received after the DUE date and time.

Biology Department Learning Goals and Objectives
The Biology department has identified content and practices learning goals, with associated learning objectives, that all biology students should attain by the end of their education at WWU. The goals specifically addressed in this class are:

Science Content Goals
• Our students will acquire in-depth knowledge from the major areas of biology and be able to integrate principles from these areas. They will be able to explain and apply their understanding of the:
  o relationship between structure and function at all levels: molecular, cellular, and organismal.
  o importance of evolutionary theory as a unifying principle of biology.
  o cellular basis for physiological processes
  o interactions between organisms and their abiotic and biotic environment.

• Our students will gain lab and field skills needed to answer biological questions. They will be able to:
  o perform a variety of lab techniques.
  o perform a variety of field techniques.
  o design a biological study and statistically analyze data.

Science Practices Goals
• Our students will develop critical thinking skills. They will be able to:
  o identify questions that can be addressed scientifically.
  o interpret data and draw conclusions from experiments.
  o demonstrate the ability to read, understand, and critically review scientific papers.

• Our students will develop effective quantitative reasoning skills. They will be able to:
  o use mathematical equations to represent and explain biological phenomena.
  o use mathematical equations and models to predict biological outcomes.

• Our students will communicate precisely and analytically in written and oral forms. They will be able to:
  o discuss biological processes using precise scientific terminology.
  o prepare written and oral reports in standard scientific formats.

• Our students will engage independently and collaboratively in the scientific process. They will be able to:
  o apply the scientific process, including designing and conducting experiments and examining hypotheses.
  o acquire the laboratory and/or field skills necessary to perform laboratory exercises and experiments.
  o place their research in a broader scientific context based on current literature.
  o evaluate the work of their peers.

Instructor Responsibilities
We are responsible for teaching you about tropical marine biology and the process of science. You should expect the following from us:
1. Clarification of learning objectives and criteria needed to succeed in the class: sharing learning objectives for the day and examples of prior student assignments.
2. Innovative learning activities that allow you to construct and expand your understanding of tropical marine biology and the process of science, and elicit evidence of learning: collaborative activities, white-boarding, classroom discussions, critical-thinking questions, and training assignments.
3. A supportive learning environment and instructor that cares deeply about whether you learn the material, stimulates your interest and motivates you: positive, engaging, and friendly classroom atmosphere; and constructive, timely and productive feedback on your work.
4. Opportunities for you to become a learning resource to one another: reviewing the work of classmates.
5. Opportunities to monitor your own learning and become aware of your understanding: self-assessment of the learning objectives and big ideas of the class.
Student Responsibilities
There are both personal and intellectual responsibilities for students. First, you will live in a foreign country in close quarters with other students. This requires that you are mature, considerate, and congenial. Second, this is an upper-division, intellectually-challenging course. This requires that you participate in course activities, work hard and effectively by yourself and with others, think critically, develop your own ideas and opinions, and share your ideas in both written and oral forms.

Shared responsibilities in the classroom:

<table>
<thead>
<tr>
<th>Where the learner is going</th>
<th>Where the learner is</th>
<th>How to get there</th>
</tr>
</thead>
<tbody>
<tr>
<td>Teacher</td>
<td>1. Clarification of learning objectives and criteria needed to succeed in the class, including why it is important to learn it.</td>
<td>2. Engineering innovative learning activities that allow learner to construct knowledge and elicit evidence of learning.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>3. Providing a supportive learning environment and constructive feedback that moves learner forward.</td>
</tr>
<tr>
<td>Peer</td>
<td>4. Activating students as learning resources for one another, including providing constructive feedback and encouragement.</td>
<td></td>
</tr>
<tr>
<td>Learner</td>
<td>5. Becoming owner of her/his own learning, including being motivated, curious and responsible.</td>
<td></td>
</tr>
</tbody>
</table>

You need to behave appropriately throughout the course to receive a grade in the class.

Intellectual Honesty
Science is based on trust. If a scientist states that he/she carried out a particular study and obtained certain results, the rest of us trust that he/she did such thing. This is one reason why there is no tolerance for people who are not intellectually honest, and this class will be no exception.

From WWU’s web site: Plagiarism is presenting as one's own in whole or in part the argument, language, creations, conclusions, or scientific data of another without explicit acknowledgement. Examples include but are not limited to:
- Using another person's written or spoken words.
- Using information from a World Wide Web site, CD-ROM or other electronic sources.
- Using statistics, graphs, charts and facts without acknowledging the source of the ideas.
- Paraphrasing, which is using someone else's argument without acknowledging the source by imitating the argument using other words.

Resources for Student:
- Understanding and Avoiding Plagiarism
- The Student's Guide to Avoiding Plagiarism (pdf), WWU Dept. of Sociology Student Writing Guide.
- What is Academic Integrity?

Equal Opportunity Rights
Students have the right to an educational experience that is free from illegal harassment or discrimination on the basis of race, color, creed, religion, national origin, sex, disability, age, veteran status, sexual orientation, gender identity or expression, marital status or genetic information. If you believe you have experienced harassment or discrimination, inform your instructor or Western’s Equal Opportunity Office as soon as possible. The Equal Opportunity Office may be reached at eoo@wwu.edu or (360) 650-3307.

Changes might be made to the syllabus along the course. These changes will be announced in advance.
